

MOONZOOM MANUAL - USING YOUR CHARGER

- 1 Plug it in.
- 2 Connect MoonZoom cable from ZoomPLUG to ZoomBASE USB Module.
- 3 Toggle iOS/Android switch on the back of ZoomBASE to match your device. Either setting works well for other USB-powered devices.
- 4 Connect your device's original USB cable, or a certified one, to the ZoomBASE module.
- 5 To add more cable length, connect MoonZoom Xtend cables between the ZoomPLUG cable and the ZoomBASE USB Module.

TIPS

- ◆ Need even more distance? You can add Xtend cables up to 60-ft (18.3M)!
- ◆ While MoonZoom provides 5.2V 2.5A at the ZoomBASE USB module, there is still some voltage drop along your device's original USB cable. Use a high-quality 1-ft USB cable to minimize the drop and get even better performance.
- ◆ Fast charge is limited to devices maximizing charge at 13W or less (select iPad Pro max at 18W).
- ◆ The ZoomBASE USB module will get WARM TO THE TOUCH. This is normal operation.
